SUMMARY

B.Tech CSE undergraduate at IIITDM Jabalpur with a strong foundation in Software Engineering, System Architecture, and Database Management. Adept at architecting secure RESTful APIs, optimizing schemas, and delivering end-to-end full-stack systems through both **academic projects** and **freelance engineering**. Eager to leverage deep knowledge of data pipelines, software design, and core CS fundamentals to build high-performance, scalable, and fully integrated solutions.

EXPERIENCE

- Data Science Intern @ Evoastra Ventures** | Remote June–Aug 2025
- Architected robust data preprocessing pipelines and ETL workflows to ingest and parse unstructured datasets using Python and Pandas.
 - Optimized data manipulation algorithms, reducing computational runtime and memory overhead for large-scale model feature engineering.
 - Built and evaluated predictive models using Scikit-learn, translating raw data into actionable statistical insights.
- IT Systems Intern @ Belimo** | Dubai, UAE May 2025
- Analyzed corporate network communication layers and data transmission efficiency using the BACnet/MSTP protocol.
 - Conducted a comprehensive technical study of existing enterprise IT integrations to document and streamline automated data flows across corporate systems.

PROJECTS

- Financial Firm Official Website - Web Application** | Freelance Developer ([asandco.in](#)) June 2026
- Engineered and deployed a custom web application for a financial firm, managing the complete architecture from backend logic to final production.
 - Managed live deployment by configuring custom domains via GoDaddy and migrating nameservers to Cloudflare.
 - Secured data routing using Cloudflare edge certificates (SSL/TLS) and optimized network performance via custom DNS caching.
- CALIBR – Multifunctional Smart Scale** | Lead Mobile Developer May 2026
- Engineered a Smart Scale replacing traditional geometry tools with an integrated hardware-software solution.
 - Developed a mobile app using React Native, Expo, and TypeScript for real-time physical measurement tracking.
 - Architected a PostgreSQL database with strict data validation to instantly sync measurements and ensure data integrity.
 - Designed a high-contrast Always-Dark UI tailored for engineering environments to optimize visibility during precision tasks.
- Sign Language to Text Application** | Team Lead & Lead Developer June 2025
- Developed a real-time gesture recognition desktop application using Python, OpenCV, MediaPipe, Scikit-learn, and Tkinter.
 - Designed a standalone Windows application featuring webcam-based gesture recognition with low-latency frame processing.
 - Created and curated a custom Indian Sign Language (ISL) dataset with frame preprocessing, feature extraction, and evaluation, achieving ~97% classification accuracy.

TECHNICAL SKILLS

Core CS Subjects: Database Management Systems (DBMS), Operating Systems, Computer Networks, Data Structures & Algorithms, Object-Oriented Programming

Backend & Security: REST APIs, User Authentication (JWT), Role-Based Access Control (RBAC), Transactional Systems (ACID)

Languages: SQL, Python, Java, C, TypeScript, JavaScript

Frameworks: Node.js, Express.js, React Native, Expo

Databases & Tools: PostgreSQL, MongoDB, Git, Cloudflare DNS config

EDUCATION

B.Tech Computer Science Engineering | IIITDM Jabalpur, Madhya Pradesh, India Expected 2027

CBSE Class 12 | Abu Dhabi Indian School, Abu Dhabi, UAE | 2023

CBSE Class 10 | GEMS United Indian School, Abu Dhabi, UAE | 2021

Languages: • English (Fluent) • Hindi (Fluent) • Tamil (Fluent) • Japanese (Basic) • Arabic (Basic)

Certificates: Google Data Analytics Professional Certificate
